Septic Tank Cover Risers

A riser is a plastic heavy duty collar that fits around your septic tank cover, which brings the cover up to the surface or just below the surface. With a green heavy duty plastic cover on top making it easily accessible for regular maintenance.

- ✓ No more having to dig up the septic tank cover every couple of years for pumping.
- ✓ No more hoping that you are digging in the right spot.
- ✓ No more paying someone to locate and dig your tank cover up for maintenance.
- ✓ The riser covers get screwed down onto the riser. No one can easily remove the cover and go for a swim.
- ✓ The riser covers have a rubber gasket. So no worries about any odors coming from the exposed cover.
- ✓ Riser can be cut flush with the surface. So that the lawn mower can ride right over top. And it doesn't get tripped over when playing in the yard.
- ✓ Or the riser can be cut an inch or two under the surface. So you can still have nice grass on top and just have to scrape the grass off for easy access.
